

CLAIM AMENDMENTS

Claim 1. (Currently Amended) A propylene resin composition comprising 80 to 40% by weight of (A) a propylene- α -olefin random copolymer with the content of a propylene unit of 99.1 to 99.9% by weight, and 20 to 60% by weight of (B) a propylene- α -olefin random copolymer with the content of a propylene unit of 70 to 90% by weight, wherein the temperature dependence of dynamic viscoelasticity of the composition is such that the composition shows has only one peak of loss tangent ($\tan \delta$) in the temperature range of -80°C to 80°C, and the temperature at which storage elastic modulus (E') is providing not more than 1×10^8 dyn/cm² or less of storage elastic module (E') is not less than 150°C, in the temperature dependence of dynamic viscoelasticity of the composition.

Claim 2. (Currently Amended) The propylene resin composition of claim 1 wherein the temperature at which E' is providing not more than 1×10^8 dyn/cm² or less of storage elastic modulus (E') is not less than 155°C.

Claim 3. (Original) The propylene resin composition of claim 1 wherein the intrinsic viscosity of the propylene- α -olefin random copolymer (B) is in the range of 0.5-2.0 dl/g.
